Coherence Not Denial

Alone among UN agencies, CND continues to block support for harm reduction

A Statement from Harm Reduction Networks to the High Level Segment of the 52nd session of the UN Commission on Narcotic Drugs

Vienna, 11—12 March 2009

Despite the proven efficacy of harm reduction interventions and endorsement by the UN bodies, uptake of these strategies, simply put, is thoroughly inadequate... [N]ational responses to injecting drug-related HIV epidemics have been poor in many parts of the world and that there still remain seventy-six states with evidence of injecting drug use in which no harm reduction interventions are present.'

Anand Grover

UN Special Rapporteur on the Right to Health

Prepared by the International Harm Reduction Association on behalf of the Network of Networks

'...coordinate and mobilize support within the UN system for the implementation of harm reduction strategies.

Anand Grover

UN Special Rapporteur on the Right to Health

Prepared by the International Harm Reduction Association on behalf of the Network of Networks

REGIONAL NETWORKS

Asian Harm Reduction Association (AHRN)  www.ahrn.net

AHRN was established in 1996 to link and support those operating harm reduction programmes or providing assistance to people who use drugs across Asia. Hundreds of individuals and organisations contribute to the network's development, and AHRN is recognised by UNAIDS as a best practice model, and by the World Health Organization (WHO) as a key partner in the response to HIV/AIDS in Asia. Its work includes networking, information sharing, advocacy, programmes and policy development, and training and capacity building.

Caribbean Harm Reduction Coalition (CHRC)  www.caribbeanharmreductioncoalition.htmlplanet.com

CHRC is a coalition of Caribbean drug treatment service providers that believe that abstinence only treatment does not serve the wider drug using population, and therefore believe in and support harm reduction interventions. CHRC is pioneering work on HIV care and treatment 'on the street', using peer outreach workers as adherence counsellors to make meaning contacts with homeless HIV positive crack smokers. With minimal funding, the CHRC members are committed to assisting individuals and communities by initiating and promoting education, interventions and community organising programmes that focus on reducing drug related harm.

Eurasian Harm Reduction Network (EHRN)  www.harm-reduction.org

EHRN (formerly the Central and Eastern European Harm Reduction Network) is a highly successful regional network working in Central and Eastern Europe and Central Asia. Established in the late 1990s, its mission is to support, develop and advocate for harm reduction approaches in the field of drugs, HIV/AIDS, public health and social exclusion by following the principles of humanism, tolerance, partnership and respect for human rights and freedoms. EHRN works on policy change and advocacy including regional analysis, and support for national efforts, capacity building and technical assistance on harm reduction, sex work and prison health and networking and information exchange among service providers and advocates. Its 2009 priorities are: developing humane national drug policies and legislation; overdose prevention and management; addressing stigma and discrimination; and expanding access to quality opioid substitution therapy services.

Intercambios Asociación Civil (Latin America)  www.intercambios.org.ar

Established in 1995, Intercambios is an Argentine NGO whose mission is to ensure the health and human rights of drug users through harm reduction. Although not a network per se, Intercambios is the key harm reduction knowledge hub in Latin America – providing networking, advocacy, research, information sharing, skills building and capacity development to the region. The organisation's three main areas of work are 'Intervention, Investigation and Advocacy', and Intercambios works together with regional partners towards influencing government and multilateral policies across Latin America.

The Middle East and North African Harm Reduction Network (MENAHRA)  www.menahra.org

MENAHRA was established in 2006 with support from the World Health Organization and IHRA, and funding from the Drossos Foundation in Switzerland. It aims to develop harm reduction across the Middle East and North Africa, and comprises three sub-regional knowledge hubs (house in Lebanon, Morocco and Iran). MENAHRA engages in capacity building, training, advocacy, research and documentation, and networking. It is also currently coordinating a Global Fund bid for the region, and has provided funding directly to service providers to implement harm reduction programmes.

Sub-Saharan Africa Harm Reduction Network (SAHRN)  www.cuPHPD.org

SAHRN was established in 2007 with support from IHRA. Its mission statement is to promote harm reduction approaches to all psychoactive substances in sub-Saharan Africa by ensuring the spread of the harm reduction principles and building networks to share knowledge and experiences. Its activities include policy work, networking, advocacy and skills building, and its aims for the region are to enable knowledge exchange, provide a supportive environment for harm reduction, and to get harm reduction on the political agenda.

SELECTED NATIONAL NETWORKS

Canadian Harm Reduction Network (CHRN)  www.canadianharmreduction.com

Established in 1999, CHRN goals are to allow for information exchange and support, to educate the public, politicians, legislators and the media about harm reduction, to ensure that drug policies in Canada exemplify harm reduction, and to work collaboratively to end the war on drugs and on the people who use them. With approximately around 600 members and a contact list of over 20,000, CHRN serves as the virtual meeting place for individuals and organisations in Canada dedicated to reducing the social, health and economic harms associated with drugs and drug policies.

Colectivo por Una Política Integral Hacia las Drogas (CUPHD)  www.cuphd.org

CUPHD is a Mexican civil society organisation dedicated to education, investigation, dissemination and action in order to transform the drug policy in Mexico to one with a harm reduction and human rights perspective and an integral, scientific and multidisciplinary focus. Its principles are ‘Information, Responsibility, Freedom’ and its objectives include the provision of comprehensive, honest and scientific information on drugs, the promotion of a ‘culture of responsibility’ towards drug use, and building strategic alliances with national and international partners in the field.

Harm Reduction Coalition (HRC)  www.harmreduction.org

HRC is a national advocacy and capacity building organisation for the United States that promotes the health and dignity of individuals and communities impacted by drug use. It was established in 1993 in order to advance policies and programs that help people address the adverse effects of drug use. It currently runs a number of programmes – including the African-American Capacity Building Initiative, the Hepatitis C Harm Reduction Project, the Harm Reduction Training Institute, the Syringe Access Expansion Project, and the Opiate Overdose Prevention Projects, as well as policy work, national conferences, coalition building, resources and publications.

This document was prepared in collaboration with the Network of Networks. Special thanks to Caribbean Harm Reduction Coalition (CHRC) and Caribbean Harm Reduction Coalition, the Harm Reduction Coalition, Intercambios and the International Network of People who Use Drugs for their assistance.

For further information contact info@ihra.net or visit www.ihra.net
ALONE AMONG UN AGENCIES, CND CONTINUES TO BLOCK SUPPORT FOR HARM REDUCTION

In June 1998, the United Nations General Assembly Special Session (UNGASS) on the World Drug Problem adopted a resolution entitled ‘International action to combat drug abuse and illicit production and trafficking’. Despite the fact that the link between HIV transmission and unsafe injecting drug use was well-known at that time, the UNGASS political declaration was silent on both HIV prevention and on harm reduction.

Today, more than 10 years on from the UNGASS on drugs, it is estimated that 15.9 million people inject drugs in 158 countries and territories around the world. Since the 1998 political declaration was adopted, many regions of the world have experienced an explosion of injecting-driven HIV infection. In some regions, up to 80% of people living with HIV are likely to have acquired the virus through unsafe injecting. In countries as diverse as China, Estonia, India, Kenya, Myanmar, Nepal, Thailand and Vietnam, HIV prevalence rates among people who inject drugs reach over 50%.

During this same period, injecting-related hepatitis C infection has remained a major unaddressed health concern, with prevalence rates among injectors reaching as high as 95% in some countries. The vast majority of people who inject drugs in countries as far-ranging as Indonesia, Thailand, Pakistan, Mauritius, Estonia, Lithuania, Russia, Ukraine, Luxembourg and Switzerland are living with hepatitis C. Ultimately, death and disease related to hepatitis C may take a bigger toll on drug injectors than HIV infection.

In March 2009, a High Level Segment of the UN Commission on Narcotic Drugs (CND) meets in Vienna to finalise the text of a new Political Declaration on drugs. It is apparent from the best interests of public health and human rights, rather than the narrow and failed language of ‘a drug free world’.

CND’s failure to embrace harm reduction, and the continued obstruction of a small number of governments to even non-binding statements of support for harm reduction programmes within the Political Declaration, clearly illustrate the degree to which the Commission is not only out of step with the scientific and medical evidence supporting harm reduction, but is also isolated from the mainstream of UN opinion on this key health policy issue.

Harm reduction is explicitly supported by the UN General Assembly, UNAIDS, the UN Office on Drugs and Crime, the World Health Organization, the International Narcotics Control Board, the UN High Commissioner for Human Rights and others. At least 84 countries around the world explicitly support, or allow the operation of, harm reduction programmes. Moreover, in 2002 the Legal Affairs Section of the UN Drug Control Programme affirmed the legality of harm reduction programmes – including opioid substitution therapy, syringe exchange and safe injecting facilities – under the international drug conventions. This finding authoritatively refutes the continued allegations by obstructionist governments and others that harm reduction is incompatible with treaty obligations.

Yet in spite of this broad and ever increasing support, CND – through its self-imposed ‘consensus at all costs’ working method – perpetuates a system that enables even a single government to block harm reduction language in its resolutions, and now in the Political Declaration.

As the international community finalises the Political Declaration and work plan that will guide the next ten years of international drug policy, it is inconceivable and indeed unconscionable that support for scientifically proven, evidence-based harm reduction programmes will again be blocked. States must show responsible leadership and act in the best interests of public health and human rights, rather than the narrow and failed language of ‘a drug free world’.

This issue is much bigger than ideology, semantics and inter-governmental wordplay.

It is about saving lives.

THE NETWORKS APPROACH
Coordinating Civil Society Engagement for Harm Reduction

INTERNATIONAL NETWORKS
International Harm Reduction Association (IHRA) www.ihra.net

Established in 1996, IHRA is one of the leading international NGOs promoting policies and practices that reduce the harms from all psychoactive substances. Based in England and Australia, IHRA has approximately 2,000 individual and organisational members around the world. IHRA activities include producing high quality research and analysis on harm reduction and human rights issues, support for the development of new harm reduction networks, international advocacy campaigns and holding major harm reduction conferences. A key principle of IHRA’s approach is to support the engagement of people and communities affected by drugs in policy-making processes, including the voices and perspectives of people who use drugs.

International Network of People who Use Drugs (INPUD) www.inpud.org

Established in 2007, INPUD is first global advocacy group organised and governed by people who use drugs. INPUD’s mission is to promote ‘Rights, Justice and Empowerment’, and it aims to ensure the representation of people who use drugs in international policy dialogue, to enable a growth in self-determining drug user organisations and to build alliances within civil society and beyond. Through regional structures (currently under development), INPUD engages in policy work, networking, skills-building, training, capacity building, and the provision of a forum for sharing ideas, technical information and strategies.

International Nursing Harm Reduction Network (INHRN) www.inhrn.net

INHRN is an international coalition of nurses, midwives and health visitors working within health care settings and settings outside health care. Globally, there are over 12 million nurses, midwives and health visitors, and these individuals are uniquely placed to promote, adopt and implement harm reduction strategies around the world. Their day-to-day work brings them into contact with substance users, making them key players in the promotion of harm reduction.

Women’s International Harm Reduction Network
The Women’s International Harm Reduction Network was established in 2008. Despite having no formal funding, this group engages in policy work, research, and skills-building in order to reduce drug-related harms to women around the world. It aims to improve education around drugs and related harms, support the rights of women who use drugs, and change the policies and programmes of local, national and international organisations as they relate to women and girls.

Youth RISE (Resource, Information, Support, Education) www.youthrise.com

Established in 2006, Youth RISE is an international youth-driven network working with young people to reduce the risks and harms associated with substance use. It focuses on youth peer leadership and recognises the specific barriers that young people face when it comes to accessing harm reduction services, advocating for harm reduction interventions or engaging in the policies and decisions at national, regional and international levels that affect their lives. Youth RISE has an International Working Group comprised of volunteer members from Canada, Mexico, the United Kingdom, Syria, Rwanda, China, Argentina, Guyana, Romania, Syria, Russia and the United States, and works in partnership with the IHRA, UNICEF and Global Youth Coalition on HIV/AIDS (GYCA).

THE NETWORK OF NETWORKS

Their day-to-day work brings them into contact with substance users, making them key players in the promotion of harm reduction.

Women’s International Harm Reduction Network
The Women’s International Harm Reduction Network was established in 2008. Despite having no formal funding, this group engages in policy work, research, and skills-building in order to reduce drug-related harms to women around the world. It aims to improve education around drugs and related harms, support the rights of women who use drugs, and change the policies and programmes of local, national and international organisations as they relate to women and girls.

Youth RISE (Resource, Information, Support, Education) www.youthrise.com

Established in 2006, Youth RISE is an international youth-driven network working with young people to reduce the risks and harms associated with substance use. It focuses on youth peer leadership and recognises the specific barriers that young people face when it comes to accessing harm reduction services, advocating for harm reduction interventions or engaging in the policies and decisions at national, regional and international levels that affect their lives. Youth RISE has an International Working Group comprised of volunteer members from Canada, Mexico, the United Kingdom, Syria, Rwanda, China, Argentina, Guyana, Romania, Syria, Russia and the United States, and works in partnership with the IHRA, UNICEF and Global Youth Coalition on HIV/AIDS (GYCA).
In June 1998, the United Nations General Assembly Special Session (UNGASS) on the World Drug Problem adopted a resolution entitled ‘International action to combat drug abuse and illicit production and trafficking’. Despite the fact that the link between HIV transmission and unsafe injecting drug use was well-known at that time, the UNGASS political declaration was silent on both HIV prevention and on harm reduction.

Today, more than 10 years on from the UNGASS on drugs, it is estimated that 15.9 million people inject drugs in 158 countries and territories around the world. Since the 1998 political declaration was adopted, many regions of the world have experienced an explosion of injecting-driven HIV infection. In some regions, up to 80% of people living with HIV are likely to have acquired the virus through unsafe injecting. In countries as diverse as China, Estonia, India, Kenya, Myanmar, Nepal, Thailand and Vietnam, HIV prevalence rates among people who inject drugs reach over 50%.

During this same period, injecting-related hepatitis C infection has remained a major unaddressed health concern, with prevalence rates among injectors reaching as high as 95% in some countries. The vast majority of people who inject drugs in countries as far-ranging as Indonesia, Thailand, Pakistan, Mauritius, Estonia, Lithuania, Russia, Ukraine, Luxembourg and Switzerland are living with hepatitis C. Ultimately, death and disease related to hepatitis C may take a bigger toll on drug injectors than HIV infection.

In March 2009, a High Level Segment of the UN Commission on Narcotic Drugs (CND) meets in Vienna to finalise the text of a new Political Declaration on drugs. This is apparent from the negotiations towards agreed language in this Declaration that a small number of countries are prepared to go to extreme lengths to block support for evidence-based, public health led approaches to drug use from appearing in CND resolutions. These obstructionist governments – including the United States, Russia, Japan, Italy and Sweden – have blocked any reference to harm reduction in the Declaration, despite the fact that up to 10% of all global HIV infections occur through unsafe injecting drug use (and over 25% of all infections outside Sub-Saharan Africa), and the best evidence suggests that over 3 million people who inject drugs are living with HIV.

CND’s failure to embrace harm reduction, and the continued obstruction of a small number of governments to even non-binding statements of support for harm reduction programmes within the Political Declaration, clearly illustrate the degree to which the Commission is not only out of step with the scientific and medical evidence supporting harm reduction, but is also isolated from the mainstream of UN opinion on this key health policy issue.

Harm reduction is explicitly supported by the UN General Assembly, UNAIDS, the UN Office on Drugs and Crime, the World Health Organization, the International Narcotics Control Board, the UN High Commissioner for Human Rights and others. At least 84 countries around the world explicitly support, or allow the operation of, harm reduction programmes. Moreover, in 2002 the Legal Affairs Section of the UN Drug Control Programme affirmed the legality of harm reduction programmes – including opioid substitution therapy, syringe exchange and safe injecting facilities – under the international drug conventions. This finding authoritatively refutes the continued allegations by obstructionist governments and others that harm reduction is incompatible with treaty obligations.

Yet in spite of this broad and ever increasing support, CND – through its self-imposed ‘consensus at all costs’ working method – perpetuates a system that enables even a single government to block harm reduction language in its resolutions, and now in the Political Declaration.

As the international community finalises the Political Declaration and work plan that will guide the next ten years of international drug policy, it is inconceivable and indeed unconscionable that support for scientifically proven, evidence-based harm reduction programmes will again be blocked. States must show responsible leadership and act in the best interests of public health and human rights, rather than the narrow and failed language of ‘a drug free world’.

This issue is much bigger than ideology, semantics and inter-governmental wordplay. It is about saving lives.

Harm reduction networks and knowledge hubs exist around the world, representing a diversity of regions, countries and populations. These networks vary enormously in size, scope and capacity, but follow the same broad approach and work closely together as equal partners in a ‘Network of Networks’ to promote harm reduction on a global basis.

The ‘networks approach’ is a relatively inexpensive and accessible way to empower civil society and advocates for harm reduction, and one that has been employed in this sector for over a decade. Networks allow individual, organisations and populations to come together and gain collective strength in terms of political influence, capacity, funding, and knowledge exchange. On their own, advocates for people who use drugs and harm reduction are often unable to engage in national, regional or international decision making. As part of a network, however, they can increase their capacity to do so through the sharing of experiences and joint action. Networking can therefore encourage and foster the development of civil society advocacy.

The Network of Networks is an informal coalition, originally formed at the IHRA conference in Brazil in 1998. It provides a forum enabling individual networks to share information, concerns and experiences, and to work together when required to campaign and advocate for harm reduction (in line with the eighth Millennium Development Goal to ‘build a global partnership for those working in development’) and respect for the human rights of people who use drugs. The focus of the Network of Networks includes not only HIV, but also drug-related health concerns such as viral hepatitis, TB and overdose as well as the negative social consequences of drug policy. The Network of Networks recognises the autonomy of existing networks, but links them together in order to further enhance their capacity and their potential to create a global political environment that unreservedly supports harm reduction interventions.

Many of the major harm reduction networks are listed in — and have contributed to — this brochure. These networks operate in a range of cultural, political and religious contexts – from North America and the Caribbean to Asia, Africa and the Middle East to Europe and Central Asia. There are also global networks such as the International Harm Reduction Association, as well as international networks of people who use drugs, women and young people, allowing specific marginalized populations to share evidence, evaluations, best practice, technical assistance, resources, materials, funding and expertise.

INTERNATIONAL NETWORKS
International Harm Reduction Association (IHRA)
www.ihra.net

Established in 1996, IHRA is one of the leading international NGOs promoting policies and practices that reduce the harms from all psychoactive substances. Coherence Not Denial

 Alone among UN agencies, CND continues to block support for harm reduction

A Statement from Harm Reduction Networks to the High Level Segment of the 52nd session of the UN Commission on Narcotic Drugs

Vienna, 11—12 March 2009

‘Despite the proven efficacy of harm reduction interventions and endorsement by the UN bodies, uptake of these strategies, simply put, is thoroughly inadequate… [N]ational responses to injecting drug-related HIV epidemics have been poor in many parts of the world and that there still remain seventy-six states with evidence of injecting drug use in which no harm reduction interventions are present.’
